FULL STACK DEVELOPER (MERN)

Full Stack Developer with ~4.5 years of experience building **scalable fintech and SaaS products**. Strong expertise in React.js, Next.js, and MERN stack with a focus on **performance optimization, reusable architecture, and business-driven solutions**.

Experienced in developing **transaction-heavy applications**, internal enterprise tools, and customer-facing platforms. Proven ability to work in agile teams and deliver high-impact features.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), HTML5, CSS3
- **Frontend:** React.js, Next.js, Redux Toolkit, React Router, Ant Design, Bootstrap, AG Grid
- **Backend:** Node.js, Express.js, REST APIs
- **Databases:** MongoDB, SQL Server
- **Tools:** GitHub, Bitbucket, VS Code
- **Core Areas:** Performance Optimization, Component Design, API Integration

PROFESSIONAL EXPERIENCE

Webile Apps (India) Private Limited

Hyderabad, Aug 2024 – Present

Project: Mutual Fund Platform (Fintech Domain)

- Developed and maintained **transaction-heavy modules** including SIP, STP, SWP, and purchase flows
- Built **highly reusable React components**, reducing development time and improving UI consistency
- Implemented **Redux Toolkit for efficient state management**, optimizing rendering performance
- Integrated multiple REST APIs for **portfolio, transactions, and statements modules**
- Worked closely with backend and product teams to deliver **secure and scalable financial workflows**
- Ensured clean architecture and maintainable code following best practices

GAC Digital Private Limited

Apr 2021 – Jan 2024

GAC Portal (Internal Product)

- Developed modules for **timesheets, payslips, and employee operations**
- Migrated legacy codebase from class components to **modern React hooks architecture**
- Improved maintainability and code consistency across modules

BYT (Book Your Timesheet – SaaS Product)

- Built platform for **employee onboarding, project tracking, and billing automation**
- Implemented **time tracking and invoice generation workflows**
- Enabled businesses to optimize resource usage and operational efficiency

Car and General (TVS Nigeria Project)

Dec 2022 – Mar 2023

- Developed a **dealer management system** for spare parts ordering and billing
- Built application using **Next.js (SSR)** improving performance and SEO
- Implemented **internationalization (i18n)** for multilingual support
- Designed features like **document uploads, order tracking, and invoice generation**
- Integrated backend APIs ensuring seamless data flow
